# PROBLEMS

- India, the world's second largest food producer, is witnessing growing distress and declining confidence in agriculture as most small and landless farmers, with less of a stake, are found to quit farming.
- Farmers get very less profit(or sometimes even loss) because of chain of intermediaries.
- Why farmers go after intermediaries or agents?
  - They don't know where/whom to sell their product.
  - They are not literate enough to do accounting calculations.
- Youth rarely think of picking up farming as a profession.

# SOLUTION

- We are shortening(or removing) the chain of Intermediaries by providing a platform to the Farmer from where he can sell his products directly to the Wholesalers/Bulk customers.
- We have tried to create a more visual app so that even an uneducated Farmer can use the app easily.
- Our app will maintain the accounts and transactions of the Farmer(Offline + Online).
- We have prepared a website on which the product is visible all over country from where the end customers can buy the product directly.
- And as the profit and transparency is increased, this will encourage the youth to choose farming as a profession.

# EXTRAS

- Top three Trending products using search analytics.
- App can work offline and get automatically sync when internet connection is be available.
